

IT Services > Cyber Security > Network Penetration Testing

Network Penetration Testing

Knowing your vulnerabilities is one of the best insights that you can get when looking to improve your network and cyber security.

By conducting a network penetration test, we will simulate a real-world cyber-attack on your business. We will try and unlock vulnerabilities in your networks, applications, devices and people with a view to learning where your systems and training needs to improve.

You do a lot to protect your critical systems and data from cyber threats. Penetration testing helps make sure those efforts are working.

This will help you determine if your data is at risk, will help you identify and mitigate those risks and will help you gain a valuable insight into where you need to focus your attention going forward.

Our network penetration testing services include:

- ✧ Physical network penetration testing.
- ✧ Wireless network penetration testing.
- ✧ Application penetration testing.
- ✧ Device penetration testing.
- ✧ Team penetration testing.

Network Penetration Testing Benefits

- ✓ **Confidence and peace of mind knowing that your business is secure.**

By testing your security, business processes and people, you will know where you stand security wise. You will know where risks lie and can then look to mitigate those in order to minimise the financial, operational and reputational damage that would occur if you were breached.
- ✓ **You can satisfy all of your business, industry and regulatory compliance needs.**

By regularly putting your security to the test with thorough penetration testing, you will be well on the way to proving compliance for accreditations such as PCI 3.x, FFIEC, HIPAA, ISO 27001 etc.
- ✓ **Validate your internal and external security controls with an independent penetration test.**

Measure the effectiveness of your security controls and manage your risk, especially when it comes to protecting high-value systems and data. By carrying out a penetration test, you will be able to gauge how secure you really are for cyber-attack.
- ✓ **Test your response and detection capabilities.**

Should our penetration testing find a vulnerability, it would prove a useful test to see how effective your response and detection capabilities are. It is best to expose vulnerabilities in your networks, configurations and applications prior to being compromised in a real-world scenario.

Discover your security vulnerabilities with our penetration testing.

Our experienced team of penetration testers will put you to the test.

Discuss your Network Penetration Testing needs by calling us on +44 203 034 2244 or +1 323 984 8908, or emailing hello@cardonet.com

Our Technology Partners

Network Penetration Testing Features

- ✧ Extensive vulnerability assessments.
- ✧ High-level executive summary report.
- ✧ Technical documentation that allows you to recreate our findings.
- ✧ Tactical recommendations for immediate improvement.
- ✧ Strategic recommendations for longer-term improvement.

Network Penetration Testing Options

- ✧ PCI Compliance and GDPR readiness assessments.
- ✧ Detailed remediation advice and inclusive repeat testing available.
- ✧ Full or part tests.

Allowing you to do more

- ✧ Keep on top of your **business security**.
- ✧ Gain **valuable insight** and **plan your next moves**.
- ✧ Gain **access** to an **expansive skill set** without recruiting.
- ✧ Easily **keep compliant**.
- ✧ Give your stakeholders **confidence** that your **data is secure**.
