

## Outsourced Network Monitoring

To be successful, you need to have access to highly available infrastructure. The most proven way of doing this is by monitoring your network on a 24x7 basis.

That way, any issues can be identified early and action can be taken to ensure that they do not become business affecting. Your team can then be more productive, bottlenecks can quickly be identified and you can focus on what you do best.

Our outsourced 24x7 network monitoring service will help ensure that your critical systems remain highly available. We will be alerted to potential performance issues and will be able to proactively make or suggest changes that will positively impact the performance of your systems.

This outsourced network monitoring service covers, but isn't limited to:

- ✧ Outsourced server and database monitoring.
- ✧ Monitoring of your backups and data storage infrastructure.
- ✧ Outsourced workstation, laptop and mobile device monitoring.
- ✧ 24x7 network infrastructure and bandwidth monitoring.
- ✧ Security infrastructure monitoring.
- ✧ Outsourced software application monitoring.

Through our effective and reliable 24x7 outsourced network monitoring, we are able to gain critical insight into your technology platform integrity and can either more easily provide you with cost-effective managed support, or provide your team with the insight that they need to perform more effectively.

## 24x7 Outsourced Network Monitoring Benefits

-  **Helps your manage your changing infrastructure, while remaining secure.**

As technology advances and your business needs change, so your network grows in complexity. With an effective outsourced monitoring service, you will be well placed to track and report on all of your IP assets to ensure smooth performance, especially when in the process of making changes. Network monitoring can also be used as a line of defence in your IT security by giving you a picture of what 'normal' looks like and then providing you with the tools to spot anything that looks 'out of the ordinary'.
-  **Early recognition of potential issues, helping eliminate downtime and providing a solid and reliable 'always on' technology service.**

By being alerted to potential issues before they become business affecting, you will benefit from a reduction of issues and will have more time to respond to issues, which will result in a much happier team. If a single member of your team is out of action, that can be a huge cost both in terms of productivity and the ability to generate revenue. A team that has reliable technology is more likely to be successful.
-  **Efficiently manage and optimise your IT infrastructure performance.**

It can be difficult to find the root cause of bottlenecks and performance issues that are impacting your team's productivity. By outsourcing the monitoring of your network, we will be able to find the root causes of most of your issues. This real-time detection and diagnosis helps with resolution times and helps optimise your IT infrastructure performance.
-  **A more effective IT Team.**

With outsourced monitoring, your team will find it easier to diagnose problems and make changes, which speeds up resolution times, ensures that your end-users remain happy and provides your IT team with more time to focus on higher value tasks.

## Outsource your network monitoring for improved issue resolution times.

Our experienced 24x7 network monitoring team have the right tools and expertise to help.

Discuss your 24x7 Outsourced Network Monitoring needs by calling us on +44 203 034 2244 or +1 323 984 8908, or emailing [hello@cardonet.com](mailto:hello@cardonet.com)

### Our Technology Partners
