Managed Business Continuity

When things go wrong, your ability to recover rapidly and securely is what is going to set you apart and allow you to deliver on your business promises. It is imperative that you have a well-designed plan that you regularly test and evaluate.

You know that there is no shortage of risk when it comes to the 24/7 operation of a business.

By having a managed business continuity service, you can rest easy knowing that you will be able to access your business IT systems in the event of a serious failure or disaster, such as a virus, security breach, hardware or software issue, data corruption or even a force majeure.

Having a well thought out and tested business continuity plan in place is critical, but maintaining a robust solution is very resource-intensive, both in terms of time, people and money.

Connecting your infrastructure to a secure, trusted off-site platform decreases your risk, reduces your costs and protects your brand reputation.

We can provide you with:

- Cold standby equipment in safe storage.
- Warm backups that can be livened up quickly.
- Hot, instantly available services.

Managed Business Continuity **Benefits**

Mission-critical application and data protection.

There is no worse feeling that when things go wrong with your mission-critical applications and data and you are out of options. With a managed business continuity service, you know that you have a compliant and tested solution that will allow you to roll back if you need to, or liven up an uncorrupted service to keep your team and business operational.

Reduced capital expenditure for maintaining your own DR infrastructure.

It is a massive capital expenditure to replicate your IT infrastructure and have expensive equipment sitting idle while waiting for a disaster to occur. By using off-site resources, you can benefit from our economies of scale and expertise, while not compromising on your service requirements.

Secure and compliant data centre and network operations.

Rest easy knowing that your business-critical applications and data is housed in industry standard secure data centres located in your desired geography. Your data is also protected and encrypted from end to end using industry accepted security protocols.

Reduced expenditure and improved operational efficiency.

Keeping a business continuity plan up-to-date and fully tested is a costly, time-consuming and lengthy process. By outsourcing that element of your technology stack, you can redeploy your resources confident in the knowledge that you are being looked after by business continuity specialists.

Fully flexible business continuity services that scale to your changing requirements.

At a time when businesses are having to change at a rapid pace to keep competitive, it is vital that you have a business continuity plan that keeps up with that change and can easily flex up or down to meet your particular business requirements.

Service that meets your specific recovery point and recovery time objectives.

You may have some services and data that you can not afford to be unavailable, but other applications and data that you could do without as a business for a period of time. By adopting a managed business continuity service, you can specify your own recovery point and time objectives, allowing you to only pay for what you actually need.

Discover how we can help you meet your **business continuity** needs.

Our friendly business continuity team will monitor, test and support you 24x7x365.
