

## Managed Networks

Your network is the backbone of your business, connecting your users locally, nationally and globally.

Your challenge is to ensure that your users can access your business-critical applications and data from multiple sites securely and on demand, while also ensuring that you control your costs. Any latency or service outages have a real impact on your team's productivity and job satisfaction, as well as your ability to meet your customer needs.

By engaging with Cardonet, you can outsource the management of either all, or only specific parts of your voice and data networks to an expert partner who always has your best interests at heart.

We are able to offer you a comprehensive range of bespoke managed network services, from initial planning and set-up through to network support, network maintenance and network security services.

## Managed Network Benefits

✓ **Securing your day-to-day operations, ensuring you always remain compliant.**

We ensure that your private, dedicated network remains private, without limiting your speed, resilience or access options. This helps you remain compliant, especially if you are in a heavily regulated industry.

✓ **Unifying access to your critical business applications and data.**

Our range of connectivity options allow you to securely connect all your locations with the best possible connectivity options.

✓ **Minimising your risk by providing you with added security options.**

You can rest assured that your data never touches the Internet, instead remaining secure in your own private network. This minimises the risk of a data breach, especially when advanced security options are adopted.

✓ **Ensuring flexibility and scalability to meet your future business requirements.**

The networks that we develop are all designed with your future requirements in mind, helping to build agility into your business as your operations change.

✓ **Improving your network efficiency and effectiveness.**

We ensure the high availability and performance of your network solution irrespective of your business workloads. This allows you to redirect budget and resources to more strategic initiatives.

✓ **Enjoying constant network availability and optimal performance.**

We deliver high-performance dedicated connectivity options that power your team, giving them rapid, robust and secure access to your applications and services.

✓ **Supporting your infrastructure consolidation and increased performance.**

With your fully managed, secure network, you will be able to consolidate your infrastructure, reducing your costs, while also ensuring that application performance is enhanced across all sites.

✓ **Reducing your network management overhead, streamlining your costs.**

Despite being a critical component of your business, managing a network is not typically a core part of your capability, but it can be resource-intensive and complex. Our experienced 24x7x365 network team will monitor and support you, reacting to issues before they become business affecting, allowing you to focus on what you do best.

Discover how we can transform your network operations.

We will monitor, support and manage your network 24x7x365 from our London Head Office.
